

## Long Chen Paper 800,000 t/a Base Paper Project Began Construction

The project of 1,500,000 t/a high quality paper board and 100,000 kW cogeneration project in Hubei Long Chen Paper Co., Ltd. (hereafter referred to as “Hubei Long Chen”) invested by Long Chen Paper (China) Co., Ltd. in Hubei Songzi began construction on June 6<sup>th</sup>, 2015. The first phase of the project will construct three paper making production lines, one 400,000 t/a liner board production line, one 350,000 t/a corrugating medium paper production line and one 50,000 t/a paper tube base paper production line, the total capacity is 800,000 t/a. In addition, cogeneration project also began to construct at the same time, it included 2×220 t/h high temperature and high pressure coal fired boiler and 2×130 t/h high temperature and high pressure circulating fluidized bed boiler, with 2×35 MW extraction back pressure type and 1×35 MW extraction condensing type turbogenerator. At the same time, the first phase will also construct waste water cycling process and other environmental

protection facilities.

The administrative procedures for examination and approval of this project had been completed, including foreign investment enterprises examination and approval establishment, business registration, tax registration, papermaking project records, the first phase of forest land use approval and land supply, the approval of safety, capability, stability and thermal power plant chimney airspace control. Project land acquisition had been all completed, 33 house buildings had been all relocated. Ground leveling project starting from the end of October 2014 had been completed. According to the public information, the first phase project is expected to put into operation in June 2017, but the staff in Hubei Long Chen informed that it will put into operation six months ahead if the project is progressing well. ▣
